In today's world, the fitness industry is rapidly adopting digital solutions to enhance member experience and streamline operations. Traditional paper-based methods for managing gym memberships are often inefficient, prone to errors, and lack the interactivity modern clients expect.

The Gym Management System aims to provide a secure, transparent, and efficient web-based platform where:

Prospective members can be guided to a suitable plan based on their goals.

Users can register, log in, and view their subscription details electronically.

Administrators can manage the entire client base, monitor subscription statuses, and view user feedback from a comprehensive dashboard.

The system leverages Node.js/Express.js for the backend, HTML/CSS/JavaScript for the frontend, and a relational MySQL database for data management. It incorporates modern authentication with JSON Web Tokens (JWT), role-based access control, and a dynamic user interface to ensure security and a high-quality user experience. The project reduces manual effort, improves data accuracy, and provides a scalable foundation for a modern fitness center.
