The Fitness Club Management System is a comprehensive full-stack web application designed to modernize and streamline the administrative and client-facing operations of a fitness center. Addressing the limitations of manual record-keeping, this project leverages a robust backend built on Node.js, Express.js, and MySQL, coupled with a dynamic frontend using HTML, CSS, and JavaScript. The system features a dual-role authentication mechanism secured by JSON Web Tokens (JWT), allowing members to register, view subscription details, and receive real-time updates via a notification inbox. Administrators benefit from a powerful dashboard offering live analytics, client management tools, and feedback monitoring. This project delivers a scalable, efficient, and user-centric solution that enhances member engagement and simplifies the complex operations of a modern fitness club.
