

EVENT	TRIGGER	ACTION	OUTPUT/RESPONSE			
User Registration	User submits the registration form with a plan selected.	Validate input, hash the password, create a new user in the Users table, and create a new record in the Subscriptions table.	Confirmation message ("User registered successfully!") or an error notification.			
User Login	User submits valid login credentials.	Authenticate user against the database, generate a JWT, and return the token and user role.	Redirect to the client or admin dashboard.			
Invalid Login	User submits invalid login credentials.	Fail authentication check.	Display an "Invalid credentials" error message.			
Review Submission	A visitor submits the contact/review form.	Validate input and create a new record in the Reviews table.	Confirmation message ("Thank you for your feedback!").			
Admin Views Clients	An authenticated admin accesses the admin dashboard.	Verify the admin's JWT and role, then fetch all client data from the database.	Display a table populated with all registered clients and their subscription details.			
Admin Views Reviews	An authenticated admin accesses the admin dashboard.	Verify the admin's JWT and role, then fetch all reviews from the database.	Display a table populated with all user-submitted reviews.			
User Logout	User clicks the "Logout" button.	Clear the JWT from the browser's local storage.	Redirect to the login page.
