

Event	Trigger	Action	Output
New User Registration	User submits form with a plan selected.	Validate input, hash password, create Users and Subscriptions records.	Account created or error message.
User Login	User enters valid credentials.	Authenticate, generate JWT, return token and role.	Login success, redirect to appropriate dashboard.
View Client Dashboard	Client logs in.	Verify client token, fetch profile and subscription data from DB.	Client dashboard with personal data is displayed.
View Notifications	Client loads the dashboard.	System fetches messages from Notifications table linked to User ID.	User sees alerts about plan expiry or updates.
Admin Views Dashboard	Admin logs in.	Verify admin token, fetch stats, clients, and reviews from DB.	Admin dashboard with live data is displayed.
Send Notification	Admin inserts message via DB/Panel.	System creates a new record in Notifications table.	Message is stored and queued for the user.
Delete Client	Admin clicks "Delete" and confirms.	Verify admin token, delete user's Subscriptions and Users records.	Client is removed from the list.
Submit Review	Visitor submits contact form.	Store the message in the Reviews table.	Confirmation message.
